

Shortened version for Interpretation and Analysis of Remote Sensing Imagery for Tracking Land Cover Changes in the San Fernando Valley

Topic: Environmental management

Problem Statement: As the valley continues to experience population growth and industrial expansion, regional planner and city officials will require accurate maps of land cover for successful planning.

Level: Basic remote sensing, but knowledge of ArcGIS

Software: ArcGIS 10.4

Description: Please see the full version of the exercise for a complete description. This exercise has been modified to allow it to be used in one to two lab periods.
